

Drug waste is too serious to treat casually. So is your budget.

Our PharmEcology® group can help you contain pharmaceutical waste while containing costs at the same time. In the end, doing both is a powerful combination.

"We've worked with PharmEcology over the past 10 years and continue to refine our system based on their periodic risk assessments. We are now focusing on reducing costs in addition to staying in compliance. We couldn't have done it so seamlessly without Waste Management's experienced PharmEcology team."

David Musa, MBA, R. Ph., Pharmacy Manager
Asset Management and Budget
UW Health, Madison, WI

THINK GREEN.®

The one thing you can expect from us is ... everything.

There's a lot more to managing pharmaceutical waste than simply discarding it.

For us, it's a direct result of our focus on the healthcare industry and pharmaceutical waste in particular. Knowledge is our foundation. Our team has a 10-year track record of assisting major healthcare systems with implementing pharmaceutical waste management programs that are cost-effective and compliant.

We also bring something else to the table – perspective. We know where proper disposal of pharmaceutical waste fits in your world. We know that keeping up with regulatory and compliance issues can be overwhelming. And we know that designing approaches you can execute is the most valuable service of all.

CUSTOMER EMPOWERMENT – Our approach is your approach. Our team will help your team – pharmacy staff, nurse educators, EVS/facilities staff – design a pharmaceutical waste program you can easily and seamlessly implement and maintain.

COST AVOIDANCE – The costs you avoid result in your biggest savings – the hours saved in development of a waste disposal strategy, the fines avoided for disposal violations, and the costs associated with the lack of program optimization.

ONGOING SUPPORT – A compliant pharmaceutical waste management program supports your organization's ongoing sustainability efforts. Our PharmEcology® group is available to answer questions and offer guidance. In addition, Waste Management can manage your waste transport and treatment processes, including waste approvals and manifest generation.

PHARMACEUTICAL KNOWLEDGE – Most pharmaceutical consultants don't have a registered pharmacist on staff. Our PharmEcology group does – in fact, we always have. This professional commitment has led to the development of products and services designed for our healthcare customers.

REGULATORY GUIDANCE – Some people view regulatory compliance as an annoyance. We view it as another opportunity to excel – with expertise and forward-thinking solutions to help avoid costly fines and last-minute compliance actions.

PROVEN TOOLS – Our core competency is pharmaceutical waste categorization. In other words, we bring order to what can otherwise be daunting. Our patented PharmE® Inventory Analysis and PharmE® Waste Wizard® tools provide precise and easily understood disposal information. These tools, coupled with PharmEcology's suite of implementation services, make the disposal of hazardous and non-hazardous pharmaceuticals a manageable experience.
